

Comprehensive Analysis and Dietary Strategies with Tableau

A College Food Choices Case Study • Folder 7: Project Conclusion & Deployment

Project Leader:	Kavya Kavya
Prepared By:	Shaik M Aftab (Data Analyst)
Project Team:	Shaik M Aftab, Kavya Kavya, Maruthi Kumar, S Sameershah, Shaik Althaf
Host Organization:	SkillWallet Internship Program
Submission Date:	July 2026

Folder 7 Metadata & Project Registry

Registry Parameter	Value Specification
Repository Phase	Folder 7 – Project Conclusion & Deployment
Primary Objective	Project Summary, Final Deployment, Repository Archiving
Final Status	Project Successfully Deployed

1. Project Conclusion Executive Summary

This final document marks the formal completion of the data analytics lifecycle for the College Food Choices study. Through the preceding phases—from Ideation through Validation—the dashboard has been successfully architected, built, and tested. The project is now ready for final deployment on the public hosting platform.

2. Project Outcomes

The project has achieved the following analytical milestones:

- **Analytical Insight:** Visual identification of stress-eating correlations.
- **System Efficiency:** Dashboard interactive response times verified under 2.5 seconds.
- **Operational Readiness:** Full technical documentation completed and structured for repository archival.

3. Final Deployment Roadmap

With all folders structured and validated, the final deployment involves:

1. Final push of the complete directory structure to the GitHub repository.
2. Publishing the production-ready Tableau workbook to the public server.
3. Submission of the integrated seven-folder technical portfolio.

4. Final Conclusion

This project has provided comprehensive insights into student dietary behaviors. The final dashboard stands as a robust tool for campus wellness stakeholders, marking the conclusion of the internship cycle.
